SMARTPRO[®] USB

USB-ENABLED UPS SYSTEMS

PROTECTS COMPUTERS WITH USB PORTS

- **Uses Universal Serial Bus for Network Power Management**

A network computer with FREE PowerAlert Software installed can monitor and manage every UPS connected to the network.

- **Automatically Regulates Incoming Voltage**

Automatic Voltage Regulation keeps USB Pc's working through low voltage conditions (brownouts).

- **Provides Reliable Battery Power During Blackouts**

Allows connected equipment to stay up safely through short blackouts and shut down safely during longer ones.

- **Protects Against Lightning and Surges . . . Guaranteed**

Stops damaging surges and filters disruptive line noise. Ultimate Lifetime Insurance guarantees protection for life!

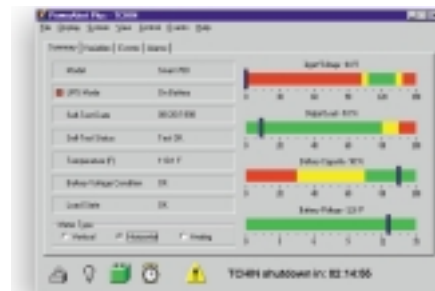

USB-Enabled Power Protection

SmartPro USB UPS Systems combine complete power protection with easy data protection for both Windows and Macintosh computers with USB ports. Equally compatible with stand-alone and network computers, the SmartPro USB is well suited for both home and office applications.

Intelligent Power Management Made Easy

SmartPro USB UPS Systems have been developed to work with computers with USB ports, providing an easy-to-configure interface that allows even non-technical users to set up automatic safeguards for their computer data. SmartPro USB UPS Systems constantly monitor incoming power and environmental conditions and report their status via a built-in USB port. Using award-winning PowerAlert Software and included USB cabling, connected computers can be configured to save open files and shut down their operating systems if left unattended during extended blackouts. During adverse power conditions, connected computers with PowerAlert may also send SNMP, e-mail or pager alerts to managers, technicians or other personnel.

User-configurable PowerAlert displays.

Complete Power Protection

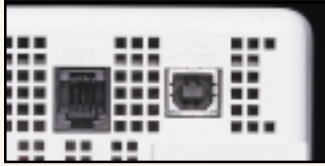

SmartPro USB gives you everything you need to protect your computer system in a single box. SmartPro USB provides complete protection against all types of power problems (brownouts, blackouts, surges and line noise). Automatic Voltage Regulation supports your equipment during brownouts. Up to 700VA of battery backup keeps your critical network equipment up and productive through short blackouts and gives you time to notify users and safely shut down your system in the event of a longer blackout. In addition, all AC outlets stop damaging lightning and surges. \$50,000 Ultimate Lifetime Insurance coverage guarantees your critical equipment will stay safe from surge damage for life!

FEATURE FOCUS

SmartPro USB's features provide power protection for mission-critical systems and the convenience of USB connectivity.

USB Computer Support

A built in USB port works with today's advanced computers, providing UPS shutdown commands and reporting without the need for costly accessories.

Convenient Battery Replacement Door

SmartPro USB models feature a rear door for convenient battery replacement.

Protects On-Line Systems

Protects your system against lightning and surges travelling on its modem or fax line. Smart 500 models offer protection for one modem or fax line, while Smart 700 models can protect two modem/fax lines in one cable simultaneously.

Optimal Outlet Array

500 and 700 VA models feature 6 surge-protected outlets (3 of which also provide battery backup for your critical equipment). Connect and protect all your equipment (computer, monitor, printer and peripherals) with one UPS. Wide outlet spacing keeps all outlets accessible, even with transformers.

Network-Wide Control

Once connected to a USB computer with PowerAlert installed, SmartPro USB UPS Systems can be monitored and managed by that computer or by any other computer running PowerAlert on the network. PowerAlert works with every major operating system, including Windows, Mac, UNIX, NetWare and more. Furthermore, it can control UPS systems from every major manufacturer.

Advanced Power Condition Warnings

SmartPro's advanced microprocessor-controlled warning lights flash and change color to inform you about 15 different performance conditions before your equipment is affected. An audible alarm alerts you to critical conditions such as blackouts.

LED Functions

 Battery Charge: Multi-colored LED displays 7 separate battery charge levels to keep you constantly aware of UPS protection status.

 AC Line Voltage: Multi-functional LED displays 3 separate voltage conditions.

 UPS Load: Multi-colored LED displays 4 separate load percentages to allow you to safely maintain the maximum use of your UPS.

 Replace Battery: Single indicator gives advance warning to proactively maintain UPS protection.

Automatic Voltage Regulation (AVR)

Abnormally low voltage conditions are created within your building by increased local demand on your power circuits or by inadequate utility company service. SmartPro USB's built-in microprocessor constantly monitors incoming voltage levels. When it detects low voltage, SmartPro USB automatically adjusts it, without using battery power,

to ensure that your connected equipment receives only regulated, computer-grade power. Furthermore, SmartPro USB UPS Systems constantly charge their batteries even while regulating voltage, so they are always ready to support your critical equipment when blackouts occur.

SPECIFICATIONS

Model	Capacity (VA/Watts)	Input/Output Voltage/Frequency (Hz)	Backup Time Half Load/ Full Load One Line	AC Receptacles	USB Port	Modem/Fax Port (type)	Dimensions (H x W x D, in.)	Shipping Weight (lb.)
SMART 500 USB	500/280	120/60	17/5	6 (3 UPS/3 Surge)	1	1 line (RJ11)	8¼ x 4¾ x 7	15.5
SMART 700 USB	700/425	120/60	17/5	6 (3 UPS/3 Surge)	1	2 line (RJ11)	10¼ x 4¾ x 7	20.5
